

## **Green and Recycled Composite Materials**

*Thematic Symposium within the 3rd International Conference on Structural Integrity*

*Madeira, Portugal, September 2-5, 2019*

The need to render new products more environmentally friendly, coming from the global awareness of ecological issues, is common to all the types of materials, including the composite materials and is gaining significant attention from both research and industry.

The aim of this thematic symposium is to spread among the research community the most up-to-date results of the scientific research in this field with focus on aspects related to:

Development, Properties, Processing, Products, Applications, Modelling, Analytical and Numerical Analysis, Functionalization, Durability Issues, Environmental Impact and Life Cycle Assessment, Recycling, Reuse, Remanufacturing, Renewability and Forthcoming Trends of Green and Recycled Composites.

The symposium will host contributions that cover, but are not limited to, applications and products for aerospace, automotive, biomedical field, construction, wind energy, electronics, packaging, sports and leisure.

### ***Organizing Committee:***

Xiaosu Yi - Chair

University of Nottingham Ningbo, China
